During air activity at night, the aircraft which, according to the noise heard, were jet aircraft had set red, green white position lights. The aircfield was lighted every night. During night flying a continuously rotating searchlight was in operation. Air activity by jet sircraft included fighter training with up to three aircraft pursuing, horizontal flying, po dives and zooming, and aerobatics included rolls, turns and slips. Aerobatics were sometimes practiced by formations of up to three aircraft. Comment. The present report confirms available information. Two fighter regions and the superfor division headquarters are believed to be stationed at Stolp-Reitz	Beginning in early spring of 1952, Stolp-Reitz (P 55/N 09) airfield was extended to the east by 800 to 1,000 meters and to the nor h. Three trucks with about 150 workers delily departed from the burgomater's office at Beilin to the airfield. In the fall of 1952, air activity by jet aircraft started, while construction work of still under vary Until spring 1953, only individual jet aircraft practiced flying, later on up to 20 jet aircraft were some aloft ut the same time also practicing rlying formations; in addition biplanes were observed flying mostly individually but a occasionally also in formations of 10 to 12 aircraft. The jet direcraft had considers swept-back wings. There was day and night flying, During air activity at high, aircraft which, according to the noise heard, were jut aircraft, had set red; treat a waite position lights. The aircited was lighted every night. During night flying a continuously retaining searchlight was in operation, air activity by jet aircraft included fighter training with up to three aircraft pursuing, horizontal flying, por dives and zooming, and aerobatics included rolls, turns and slips. Aerobatics were semetimes practiced by formations of up to three aircraft. **Al **Grandania** The present report confirms available information. Two fighter regin and upe, superior division headquarters are believed to be stationed at Stolp-Reitz airfield.		*			. :	te :	<u> </u>	2 m. 198	• •	
Beginning in early spring of 1952, Stolp-Reitz (P 55/N 09) airfield was extended to the east by 800 to 1,000 meters and to the north. Three trucks with about 150 workers daily departed from the burgomaster's office at Dedlin — to the airfield. In the fall of 1952, air activity by jet aircraft started, while construction work still under way. Until epring 1953, only individual jet aircraft practiced flying, later on up to 20 jet aircraft were seen aloft at the same time aiso practicing fly in formations; in addition biplianes were observed flying mostly individually but occasionally also in formations of 10 to 12 aircraft. The jet aircraft had consider swept-back wings. There was day and night flying, During air activity at night, the aircraft which, according to the noise heard, were jut aircraft, had set red, green white position lights.
